Those that have currently had sites done through our services will receive daily database backups for a 6 months. Backups will be sent via email on a daily basis.

All new customers will also receive this service.

These backups will restore your database if in any case there is a malicious attack to your site. Though, we will not reload the database files to correct mistakes.

There is always no guarantees but it should make your site a little safer. If requested (paid service) monthly site backups is possible, or you can do it yourself.

I highly recommend some type of backup system for your site.
